

# We Are Hiring

## Analyst Position – Delhi, India

### Position Currently Available

- **Job function:** Energy Analyst, full-time
- **Start date:** As soon as possible
- **Salary:** Entry Level
- **Office location:** Delhi, India

### About Us

The Lantau Group is a leading strategy and economics consultancy with a focus on the Asia Pacific energy industry. We are boutique and specialized in providing economic and regulatory consulting services, transaction support, asset valuation and assistance in the development, evaluation, and implementation of business strategies and opportunities.

The founding partners possess extensive global experience and long history of advising on energy economic and commercial matters. Our consultants are drawn from prestigious universities across the world and combine expertise in strategy, finance, regulation, commerce, and operations to develop innovative solutions for our clients. We advise major energy and power companies in the region, regulatory bodies, and public sector agencies governing the power and energy sector, and financial institutions such as investment banks, brokerage firms and fund managers.

Our team is diverse, but all share outstanding writing, analytical, and quantitative skills, in addition to an interest in energy economics, public policy, and the challenge of solving critical business problems.

### What We Seek

At TLG, you will be working with highly experienced power and energy professionals on diversified and complex engagements and will have opportunity to meet and present your findings to clients who are sector leaders in the region.

As such, we offer a competitive remuneration package with comprehensive medical insurance.

We are seeking an energetic, proactive, and intellectual individual to be part of our fast-growing and high-performing team. We seek candidates who have excellent analytical and logical problem-solving skillsets with strong attention to detail and ability to communicate effectively in verbal and written English. Successful candidates are those who can thrive by working independently or in a team, take initiative to complete tasks, enjoy seeking solutions, and engage in and complete challenging projects.

We welcome applications from highly-motivated young professionals interested in developing a career in consulting and with an interest in the Asia-Pacific energy sector. Working at The Lantau Group means a great variety of work and client exposure at an early stage, and high performers can expect rapid advancement to positions of greater responsibility. The Analyst is expected to work closely with the India team primarily but will also engage with partners and consultant teams in other parts of Asia Pacific depending on project requirements.

In this role the analyst will apply both qualitative and quantitative skills across ongoing engagements. Around twenty per cent of the time will be devoted to preparing the quarterly subscription product on India's power market. The remainder of the work will involve structured research, data handling, economic and regulatory analysis, development of quantitative inputs for models in Python, R, or GAMS, drafting reports and presentations, and supporting business development tasks such as preparing proposal material and credentials. Prior experience with demand forecasting, capacity expansion planning, or similar quantitative market work is helpful, as is comfort working with large datasets including time series. Experience preparing slide decks and written outputs for clients is also valued. This profile therefore suits someone who can move between technical tasks and careful written output, and who is willing to deepen capability in these methods over time.

## Job Specifications

### Key Responsibilities

- Support managers and consultants in executing project work through structured qualitative and quantitative research
- Build and maintain datasets and research-based inputs to support ongoing engagements
- Identify relevant issues, organise information, and propose clear analytical approaches to assigned tasks
- Prepare well-structured and professionally formatted drafts of reports, slides, and written outputs for client use
- Contribute to model support work, including preparation and processing of inputs for forecasting, capacity expansion, portfolio analysis, and related studies in Python or GAMS

- Participate in business development tasks such as preparation of proposal material and credentials where required
- Present findings to internal or client audiences in a clear and concise manner.

#### **Core Attributes**

- Strong logical problem-solving and analytical ability
- Care and precision in both numerical analysis and written work
- Ability to apply practical judgement when evaluating data or approaches
- Steady performance under tight timelines, with a collaborative and reliable working style

#### **Requirements**

- Undergraduate or postgraduate degree in economics, engineering, statistics, mathematics, finance, or another quantitative discipline, with strong academic performance from a recognised Indian or global institution
- Strong working proficiency in MS Office, in particular PowerPoint, Excel, and Word
- Genuine interest in consulting as a career pathway and in the Indian power and energy market landscape
- Fluency in English and another Indian language (written and spoken) and ability to write clearly and precisely

#### **Additional Advantageous Skillset (not required)**

- Strong and confident verbal communications skills
- Experience in consulting, research, or applied analytics in the power sector
- Prior exposure to market analysis in power or renewables (for example: demand studies, pricing analysis, policy research)
- Strong verbal communication skills and comfort presenting work in a structured manner
- Ability to work with large datasets (time series), including basic data cleaning and visualisation
